The **Tour AD DI** 5-R2, R1 and S flex, 6-SR, S and X flex, 7-S and X flex and 8-S and X are available in two color schemes of orange with white bands and green rings and a 2nd color option of black with white bands and silver rings. The **Tour AD DI** 5-X, 6-TX, 7-TX, 8-TX and 9-X flex shafts are available only in the orange color scheme.

The **Tour AD DI** is our first shaft design that was integrated with Toray Company's original NANOALLOY material technology in the tip section of the shaft. This material technology has now come to be known as "**DI Technology**". This unique material technology promotes additionally shaft stability without the loss of feel and allows the player to create greater club head speed and thus greater ball speed while still providing exceptional feel and control.

The **Tour AD DI** also utilizes premium, aerospace quality 50t carbon-fiber materials to provide the best performing shaft available. The softer mid-section bend profile of the **Tour AD DI** allows the player to load the shaft properly, yet it maintains a firm enough tip section through impact promoting a high launch and low spin ball flight condition. The result, the **Tour AD DI** delivers players to the next level in shaft performance and will create a "**DEEP IMPACT**" on your game!

* COMBO FLEX - The G-Tech Wood and Iron shafts are a Combo Flex shaft, meaning the shaft blanks are sold as two types, the L/A Flex and R/S Flex. The amount of tipping at installation is what determines the final shaft flex.

COMBO Flex Example #1: If you desire a G-Tech Regular Flex shaft for a Driver, you would buy the GTECH2DR-R/S part number and it would not be tipped for a Driver application.

COMBO Flex Example #2: If you want a G-Tech Stiff Flex shaft for a Driver, you would buy the GTECH2DR-R/S part number and it would be tipped 2.0" for a Driver application.

* Graphite Design encourages consulting a PGA Professional or qualified club builder to help you determine the correct shaft and length for your swing profile and to meet your goals.

* Always leave a minimum of 0.5" of the parallel tip section of the shaft above the hosel. For example with a hosel depth of 1.5" and a parallel tip length of 4.0", the tip trim length should not exceed 2.0".

* Improper installation may effect the intended performance of the shaft. Warranty is for material and workmanship of our products. Improper installation voids manufacture warranty of product.
